

My Name is Kaung Nyo Lwin and I was born in 1994. I am studying for a master's degree in data science and artificial intelligence at the Asian Institute of Technology(AIT). My studies at AIT made me progress in almost different aspects except that I am still struggling with time management, which is my greatest challenge. I am interested in self-supervised learning, especially for vision. Moreover, I want to be a competent data scientist after graduation.

As a person who has a passion for technological advancements, especially AI, the question of cultural values vs advancements is always dazzled in my head. In my opinion, advancements in civilization is inevitable for the sake of survivability. Although I accept a balance between these two values, I will choose advancements if I have to make a choice. The reason is that cultural values are always changing. It can be seen in the generation gaps among different ages. So, there is acceptance of preserving cultural values from technological progress, I believe that technologies will move the cultural values.
